

Empty Oil Containers & Used Oil Filters

Collection & Recycling

Heritage-Crystal Clean's vision is to protect the earth's resources by helping the business world run cleaner. We are committed to sustainable waste recovery operations, utilizing new ways to recycle and reuse waste using modern technology.

When Heritage-Crystal Clean collects used oil filters and empty oil containers, the waste management process is approached with a sustainability mindset. Whenever possible, the waste will be recycled, reused, or implemented in a waste-to-energy process.

Empty oil containers are sent to a third-party facility for cleaning and shredding. The shredded materials are the used to create recycled plastics, which are used is a variety of manufacturing applications.

Used oil filters are collected and sent to a third-party oil filter processing plant for processing. The filters are crushed to separate the used oil and scrap metal. The used oil is sent to our Re-Refinery in Indianapolis, Indiana and re-refined into high-quality Group II base oils. The scrap metal is sent to a recycling center to be made into steel products.

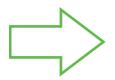

Heritage-Crystal Clean's approach to waste management is focused on protecting the environment and creating a brighter, more sustainable future.
